

# 3 speed Rotary Encoder Full Step library for Arduino

---

This is an optimized three speed Rotary Encoder library for Arduino which supports:

- Full step Rotary Encoder types.
- Detect three rotation speeds.
- Configurable sensitivity.
- Polling and interrupt based.
- Single or multiple Rotary Encoders.
- Optional Rotary button.

## Hardware

---

Connect the two rotary pins to the DIGITAL pins of an Arduino board.

A third rotary button pin is not used in the Rotary library, but can be used in the sketch.

Tested with Arduino IDE v1.8.5 on hardware:

- Arduino UNO
- Arduino Nano
- Arduino Micro
- Arduino Pro or Pro Mini
- Arduino Mega or Mega2560
- Arduino Leonardo
- WeMos D1 R2 & mini (ESP8266)

## Interrupts

Both rotary pins must be connected to a DIGITAL pin with interrupt support, such as `INT0` or `INT1`. This is chip specific. Please refer to the documentation of your board or [attachInterrupt\(\)](#).

## Arduino UNO hardware

The connection below can be used for polled and interrupts. An optional button pin can be connected to DIGITAL pin 4.

## Arduino WeMos D1 R2 & mini (ESP8266) hardware

Note that some ESP8266 pins mixes ESP8622 GPIO pins with Arduino digital pins. Connect a Rotary Encoder to the following pins which can be used with polled and interrupt examples:

Rotary pin	ESP8622	Text on board WeMos D1 R2
1	GPIO13	D7 MOSI
2	GPIO12	D6 MISO
Button	GPIO14	D5 SCK
LED (Not used)	GPIO2	D4

## Examples

The following examples are available:

- Rotary | Interrupt | [InterruptFullStepBasic](#)
- Rotary | Interrupt | [InterruptFullStepButton](#)
- Rotary | Interrupt | [InterruptFullStepCounter](#)
- Rotary | Polled | [PolledFullStepBasic](#)
- Rotary | Polled | [PolledFullStepButton](#)
- Rotary | Polled | [PolledFullStepCounter](#)
- Rotary | Polled | [PolledFullStepMultiple](#)

## Usage

---

### Read rotary with polling

```
1  #include <RotaryFullStep.h>
2
3  // Connect rotary pins to the DIGITAL pins of the Arduino board
4  #define ROTARY_PIN1  2
5  #define ROTARY_PIN2  3
6
7  // Initialize full step rotary encoder, default pull-up enabled, default
8  // sensitive=100
9  RotaryFullStep rotary(ROTARY_PIN1, ROTARY_PIN2);
10
11 // Or initialize full step rotary encoder, pull-up disabled, default sensitive=100
12 RotaryFullStep rotary(ROTARY_PIN1, ROTARY_PIN2, false);
13
14 // Or initialize full step rotary encoder, pull-up enabled, sensitive 1..255
15 // A higher value is more sensitive
16 RotaryFullStep rotary(ROTARY_PIN1, ROTARY_PIN2, true, 150);
17
18 void loop()
19 {
20     int rotaryState = rotary.read();
21
22     // rotaryState = -3: Counter clockwise turn, multiple notches fast
23     // rotaryState = -2: Counter clockwise turn, multiple notches
24     // rotaryState = -1: Counter clockwise turn, single notch
25     // rotaryState = 0: No change
26     // rotaryState = 1: Clockwise turn, single notch
27     // rotaryState = 2: Clockwise turn, multiple notches
28     // rotaryState = 3: Clockwise turn, multiple notches fast
29 }
```

### Read rotary with interrupts

```
1  #include <RotaryFullStep.h>
2
3  // Connect rotary pins to Arduino DIGITAL pins with interrupt support:
4  //
5  // +-----+-----+
6  // |           Board           | DIGITAL interrupt pins |
```

```

7 // +-----+-----+
8 // | Uno, Nano, Mini, other 328-based | 2, 3 |
9 // | Mega, Mega2560, MegaADK        | 2, 3, 18, 19, 20, 21 |
10 // | Micro, Leonardo, other 32u4-based | 0, 1, 2, 3, 7 |
11 // +-----+-----+
12 //
13 #define ROTARY_PIN1 2
14 #define ROTARY_PIN2 3
15
16 // Initialize full step rotary encoder, default pull-up enabled, default
17 // sensitive=100
18 RotaryFullStep rotary(ROTARY_PIN1, ROTARY_PIN2);
19
20 // Or initialize full step rotary encoder, pull-up disabled, default sensitive=100
21 RotaryFullStep rotary(ROTARY_PIN1, ROTARY_PIN2, false);
22
23 // Or initialize full step rotary encoder, pull-up enabled, sensitive 1..255
24 // A higher value is more sensitive
25 RotaryFullStep rotary(ROTARY_PIN1, ROTARY_PIN2, true, 150);
26
27 void setup()
28 {
29     // Initialize pin change interrupt on both rotary encoder pins
30     attachInterrupt(digitalPinToInterrupt(ROTARY_PIN1), rotaryInterrupt, CHANGE);
31     attachInterrupt(digitalPinToInterrupt(ROTARY_PIN2), rotaryInterrupt, CHANGE);
32 }
33
34 void rotaryInterrupt()
35 {
36     int rotaryState = rotary.read();
37
38     // rotaryState = -3: Turn left fastest
39     // rotaryState = -2: Turn left faster
40     // rotaryState = -1: Turn left
41     // rotaryState = 0: No change
42     // rotaryState = 1: Turn right
43     // rotaryState = 2: Turn right faster
44     // rotaryState = 3: Turn right fastest
45 }

```

## Installation with Git

`Git` is the preferred way to keep this library up to date, because the Arduino Library manager does not update as long as this library is not added to the official Arduino Library database.

### Install Git client for Windows

Install a [Git client for Windows](#).

### Install Git client for Linux

Open a command prompt and install a Git client for Linux, such as Debian Ubuntu:

```
1 | sudo apt-get install git
```

## Get Arduino libraries directory

This library must be installed in the Arduino Sketchbook library subdirectory.

To retrieve the Arduino Sketchbook directory, open the Arduino IDE Preferences dialog box via: **File** | **Preferences** | **Settings tab** and copy the Sketchbook location.

For example on:

- Windows : `C:\Users\User\Documents\Arduino`
- Linux: `/home/user/Arduino`

## Clone this library

Clone this library by opening a command prompt:

- Windows: ( `Windows key + R` , Type `cmd` + `[ENTER]` )
- Linux: Depends on your version.

Then type:

```
1 | # Change directory to the sketchbook directory as configured in the Arduino IDE:
2 | # Windows:
3 | cd C:\Users\User\Documents\Arduino
4 | # Linux:
5 | cd ~/Arduino
6 |
7 | # Go to the libraries subdirectory
8 | cd libraries
9 |
10 | # Run the git clone library once:
11 | git clone https://github.com/Erriez/ErriezRotaryEncoderFullStep.git
```

**IMPORTANT:** Restart the Arduino IDE.

## Update this library

Open a command prompt and type:

```
1 | # Change directory to the sketchbook directory as configured in the Arduino IDE:
2 | # Windows:
3 | cd C:\Users\User\Documents\Arduino
4 | # Linux:
5 | cd ~/Arduino
6 |
7 | # Go to the libraries subdirectory
8 | cd libraries
9 |
10 | # Update the library:
11 | git pull
```

**IMPORTANT:** Restart the Arduino IDE.
