3 speed Rotary Encoder Full Step library for Arduino

This is an optimized three speed Rotary Encoder library for Arduino which supports:

- · Full step Rotary Encoder types.
- · Detect three rotation speeds.
- · Configurable rotation speed sensitivity.
- · Polling and interrupt based.
- · Single or multiple Rotary Encoders.
- · Optional Rotary button.
- · Pin state table in flash.

Full step / half step Rotary Encoders

The difference between a full step or half step Rotary Encoder type is how the data signals of the two pins are generated. It depends on the mechanical construction of the notches and contacts inside the Rotary Encoder.

Please refer to the ErriezRotaryEncoderHalfStep library for half step Rotary Encoders. Experiment with the half step and full step libraries which works optimal for your Rotary Encoder.

Hardware

Connect the two rotary pins to the DIGITAL pins of an Arduino board.

A third rotary button pin is not used in the Rotary library, but can be used in the sketch.

Tested with Arduino IDE v1.8.5 on hardware:

- · Arduino UNO
- · Arduino Nano
- · Arduino Micro
- · Arduino Pro or Pro Mini
- · Arduino Mega or Mega2560
- · Arduino Leonardo
- WeMos D1 R2 & mini (ESP8266)

Interrupts

Both rotary pins must be connected to a DIGITAL pin with interrupt support, such as INTO or INT1. This is chip specific. Please refer to the documentation of your board or attachInterrupt().

Arduino UNO hardware

The connection below can be used for polled and interrupts. An optional button pin can be connected to DIGITAL pin 4.

Rotary pin	Arduino UNO/NANO/Mega2560/Leonardo board
1	DIGITAL pin 2 (INT0)
2	DIGITAL pin 3 (INT1)
Button (optional)	DIGITAL pin 4
GND	GND

Arduino WeMos D1 R2 & mini (ESP8266) hardware

Note that some ESP8266 pins mixes ESP8622 GPIO pins with Arduino digital pins. Connect a Rotary Encoder to the following pins which can be used with polled and interrupt examples:

Rotary pin	ESP8622 pin	Text on board / WeMos D1 & R2
1	GPIO13	D7 (MOSI)
2	GPIO12	D6 (MISO)
Button (optional)	GPIO14	D5 (SCK)
LED (Not used)	GPIO2	D4
GND	GND	GND

Note: An external pull-up resistor is required when a pin does not have an internal pull-up.

```
1 {c++}
2 // Connect the rotary pins to the WeMos D1 R2 board:
3 #define ROTARY_PIN1 12
4 #define ROTARY_PIN2 13
5 #define ROTARY_BUTTON_PIN 14
```

Examples

The following examples are available:

- Rotary | Interrupt | InterruptFullStepBasic
- Rotary | Interrupt | InterruptFullStepButton
- Rotary | Interrupt | InterruptFullStepCounter
- Rotary | Polled | PolledFullStepBasic
- Rotary | Polled | PolledFullStepButton
- Rotary | Polled | PolledFullStepCounter
- Rotary | Polled | PolledFullStepMultiple

Documentation

- Doxygen online HTML
- Doxygen PDF

Usage

Read rotary with polling

```
1 {c++}
2 #include <RotaryFullStep.h>
4 // Connect rotary pins to the DIGITAL pins of the Arduino board
5 #define ROTARY_PIN1
6 #define ROTARY_PIN2
8 // Enable ONE of the three constructors below with different number of arguments:
10 // Initialize full step rotary encoder, default pull-up enabled, default
11 // sensitive=100
12 RotaryFullStep rotary(ROTARY_PIN1, ROTARY_PIN2);
14 // Or initialize full step rotary encoder, pull-up disabled, default sensitive=100
15 // RotaryFullStep rotary(ROTARY_PIN1, ROTARY_PIN2, false);
16
17 // Or initialize full step rotary encoder, pull-up enabled, sensitive 1..255
18 // A higher value is more sensitive
19 // RotaryFullStep rotary(ROTARY_PIN1, ROTARY_PIN2, true, 150);
20
21 void loop()
22 {
     int rotaryState = rotary.read();
23
24
25
    // rotaryState = -3: Counter clockwise turn, multiple notches fast
    // rotaryState = -2: Counter clockwise turn, multiple notches
     // rotaryState = -1: Counter clockwise turn, single notch
2.7
    // rotaryState = 0: No change
28
    // rotaryState = 0. No Clange
// rotaryState = 1: Clockwise turn, single notch
// rotaryState = 2: Clockwise turn, multiple notches
// rotaryState = 3: Clockwise turn, multiple notches fast
29
30
```

Read rotary with interrupts

```
2 #include <RotaryFullStep.h>
4 // Connect rotary pins to Arduino DIGITAL pins with interrupt support:
6 // +-
7 // |
                                          | DIGITAL interrupt pins
8 // +-----
9 // | Uno, Nano, Mini, other 328-based | 2, 3
10 // | Mega, Mega2560, MegaADK | 2, 3, 18, 19, 20, 21
11 // | Micro, Leonardo, other 32u4-based | 0, 1, 2, 3, 7
13 //
14 #define ROTARY_PIN1
15 #define ROTARY_PIN2
16
17 // Enable ONE of the three constructors below with different number of arguments:
18
19 // Initialize full step rotary encoder, default pull-up enabled, default
20 // sensitive=100
21 RotaryFullStep rotary(ROTARY_PIN1, ROTARY_PIN2);
22
23 // Or initialize full step rotary encoder, pull-up disabled, default sensitive=100
24 // RotaryFullStep rotary(ROTARY_PIN1, ROTARY_PIN2, false);
26 // Or initialize full step rotary encoder, pull-up enabled, sensitive 1..255
27 // A higher value is more sensitive
28 // RotaryFullStep rotary(ROTARY_PIN1, ROTARY_PIN2, true, 150);
29
30 void setup()
31 {
```

```
// Initialize pin change interrupt on both rotary encoder pins
attachInterrupt(digitalPinToInterrupt(ROTARY_PIN1), rotaryInterrupt, CHANGE);
attachInterrupt(digitalPinToInterrupt(ROTARY_PIN2), rotaryInterrupt, CHANGE);
}

void rotaryInterrupt()

fint rotaryState = rotary.read();

// rotaryState = -3: Counter clockwise turn, multiple notches fast
// rotaryState = -2: Counter clockwise turn, multiple notches
// rotaryState = -1: Counter clockwise turn, single notch
// rotaryState = 1: Clockwise turn, single notch
// rotaryState = 1: Clockwise turn, multiple notches
// rotaryState = 2: Clockwise turn, multiple notches
// rotaryState = 3: Clockwise turn, multiple notches
// rotaryState = 3: Clockwise turn, multiple notches
// rotaryState = 3: Clockwise turn, multiple notches fast
// rotaryState = 3: Clockwise turn, multiple notches fast
```

Library dependencies

· None.

Library installation

Class Documentation

4.1 RotaryFullStep Class Reference

Full step Rotary Encoder class.

#include <RotaryFullStep.h>

Public Member Functions

- RotaryFullStep (uint8_t pin1, uint8_t pin2, bool pullUp=true, uint8_t sensitivity=100) Constructor full step Rotary Encoder.
- int read ()

Read Rotary Encoder state.

void setSensitivity (uint8_t sensitivity)

Set sensitivity value.

uint8_t getSensitivity ()

Get sensitivity value.

4.1.1 Detailed Description

Full step Rotary Encoder class.

Definition at line 41 of file RotaryFullStep.h.

4.1.2 Constructor & Destructor Documentation

4.1.2.1 RotaryFullStep::RotaryFullStep (uint8_t pin1, uint8_t pin2, bool pullUp = true, uint8_t sensitivity = 100)

Constructor full step Rotary Encoder.

Parameters

pin1	Rotary Encoder pin 1					
pin2 Rotary Encoder pin 2						
pullUp	true: Enable internal pull-up on Rotary Encoder pins [default argument]. false: Disable internal pull-up on Rotary Encoder pins.					
sensitivity	Set sensitivity rotation speed value 0255. A higher is more sensitive for rotation speed, a smaller					
	value is less sensitive or will disable speed detection. Default is 100.					

10 Class Documentation

Definition at line 88 of file RotaryFullStep.cpp.

4.1.3 Member Function Documentation

4.1.3.1 uint8_t RotaryFullStep::getSensitivity ()

Get sensitivity value.

Returns

Sensitivity value 0..255.

Definition at line 179 of file RotaryFullStep.cpp.

4.1.3.2 int RotaryFullStep::read ()

Read Rotary Encoder state.

Call this function as fast as possible to prevent missing pin changes. This seems to work for most rotary encoders when calling this function within 10ms in an endless loop.

The sensitivity value is used to calculate three rotation speeds by measuring the speed of the Rotary Encoder pin changes. The rotation speed depends on the number of Rotary notches and knob size. The value should experimentally determined.

Returns

Rotary speed and direction -3: Counter clockwise turn, multiple notches fast -2: Counter clockwise turn, multiple notches -1: Counter clockwise turn, single notch 0: No change 1: Clockwise turn, single notch 2: Clockwise turn, multiple notches 3: Clockwise turn, multiple notches fast

Definition at line 119 of file RotaryFullStep.cpp.

4.1.3.3 void RotaryFullStep::setSensitivity (uint8_t sensitivity)

Set sensitivity value.

Parameters

sensitivity Sensitivity value 0..255

Definition at line 168 of file RotaryFullStep.cpp.

The documentation for this class was generated from the following files:

- · RotaryFullStep.h
- RotaryFullStep.cpp

File Documentation

5.1 RotaryFullStep.cpp File Reference

Three speed full step Rotary Encoder library for Arduino.

```
#include <pgmspace.h>
#include "RotaryFullStep.h"
```

Macros

• #define DIR_NONE 0x00

No complete step yet.

• #define DIR_CW 0x10

Clockwise step.

• #define DIR_CCW 0x20

Counter-clockwise step.

• #define RFS_START 0x00

Rotary full step start.

• #define RFS_CW_FINAL 0x01

Rotary full step clock wise final.

• #define RFS_CW_BEGIN 0x02

Rotary full step clock begin.

• #define RFS_CW_NEXT 0x03

Rotary full step clock next.

• #define RFS_CCW_BEGIN 0x04

Rotary full step counter clockwise begin.

• #define RFS_CCW_FINAL 0x05

Rotary full step counter clockwise final.

• #define RFS_CCW_NEXT 0x06

Rotary full step counter clockwise next.

12 File Documentation

5.1.1 Detailed Description

Three speed full step Rotary Encoder library for Arduino.

5.2 RotaryFullStep.h File Reference

Three speed full step Rotary Encoder library for Arduino.

```
#include <Arduino.h>
```

Classes

• class RotaryFullStep

Full step Rotary Encoder class.

5.2.1 Detailed Description
